S.R. 46 Lake Jesup Bridge Replacement Project- Marine Advisory

Seminole and Volusia Counties, east of the City of Sanford., FL- The Florida Department of Transportation's contractors, Johnson Brothers and Misener Marine, are currently installing a temporary construction bridge adjacent to the existing S.R. 46 Lake Jesup Bridge over the waterway.

The temporary construction bridge is being installed across the channel to enable the contractor to construct the new bridge. There will be a 16 foot wide opening in the temporary construction bridge to allow marine traffic to navigate from the St. Johns River into Lake Jesup.

Due to safety reasons there will be short time periods when the channel will be closed to marine traffic. The channel will remain open at all times during weekends.

The temporary construction bridge is for the use of the construction crews only and "No Trespassing" signs have been posted.

Yellow floating safety barriers will be in place to assist marine traffic traveling through the construction area. Marine traffic should use caution in the construction area for both boater and worker safety.
